

Bojesen, Anders Miki

University of Copenhagen

Professor Anders Miki Bojesen has worked with prevention of bacterial infections for more than 20 years. A major focus is also antimicrobial resistance and how to minimize that on a national and international level. This includes work in his own research group at Copenhagen University but also as coordinator of large multidisciplinary consortia including researchers with a veterinary, medical, natural science, psychological, economic and anthropological background.

Since 2016 he has been a member (the last two years as head) of the Danish Council for Better Hygiene, an NGO aiming at improving hygienic standards at all levels of the Danish society. The Council strives to bridge the gaps between public and private organizations, between people of any age, and between different governmental institutions. The Council for Better Hygiene interacts directly with the Danish parliament and has a seat in the Danish National Council for Antimicrobial Resistance. The Council hosts several annual conferences and campaigns with an overall aim of increasing awareness of good hygienic practices.
