

Ganna, Andrea

Institute for Molecular Medicine Finland, University of Helsinki

Andrea is a FIMM-EMBL group leader at FIMM and a research associate at Harvard Medical School and Massachusetts General Hospital. Previously he did his post-doc at the Analytical and Translation Genetic Unit at Massachusetts General Hospital/Harvard Medical School/Broad Institute and his PhD at Karolinska Institute. His research interests lie at the intersection between epidemiology, genetics and statistics. His research vision is to integrate genetic data and information from electronic health record/national health registries to enhance early detection of common diseases and enable more effective public health interventions.
