# How can the SDGs transform human health? ... approaches for equity and resilience

### To meet SDGs, systems for health and well-being

Two different, testable propositions for development

MDG: <u>vertical time-limited programmes</u> targeting major causes of illness and death in developing world (mothers, children, infections)

SDG: <u>horizontal sustainable systems</u> to accelerate health gains through treatment and (especially) prevention

### Health from and for sustainable development

**Individuals & Society** 

### SDGs emphasize prevention, equity, public good

#### Goal 3 covers all of health, linked to other Goals

SDG3: ensure healthy lives and promote well-being for all at all ages

Target 3.8: Achieve universal health coverage

**MDG** unfinished & expanded agenda

New targets for NCDs

Means of implementing

Interactions with other economic, social and environmental SDGs and SDG 17 on means of implementation

### Building systems for health and well-being

EB & WHA 2017

Sustainable systems for health	1	Health in All sectors
	2	Universal Health Coverage
Essential ingredients and qualities	3	Equity
	4	Responsiveness
	5	Finance
	6	Research & innovation
	7	Measurement
	8	Sustainability

#### SDGs raise profile of health in development

### Priority #1: Universal Health Coverage

**Tedros Adhanom** Ghebreyesus og who

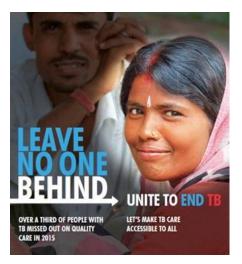

"The *right* of every individual to basic health services will be my top priority"

#### Think systems: UHC and equity to "End TB"

			TARGETS	
	MILES	TONES	SDG*	END TB
	2020	2025	2030	2035
Reduction in number of TB deaths compared with 2015 (%)	35%	75%	90%	95%
Reduction in TB incidence rate compared with 2015 (%)	20%	50%	80%	90%
TB-affected families facing catastrophic cost due to TB (%)	o%	0%	0%	0%

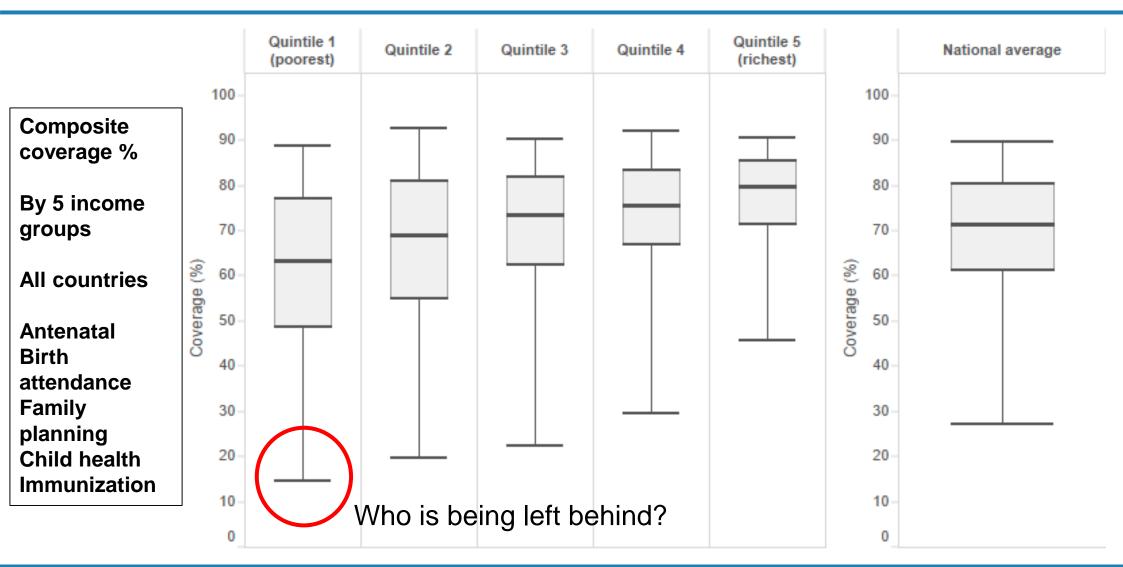

## Equity: identifying those who do get left behind a precondition for action

### Equity: poor people in LMICs have less access to community-based health insurance

- CBHI = voluntary, nonprofit health insurance, organized and managed at community level
- 49 studies in Africa, Asia, South America
- Poor less willing to pay for CBHI, lower enrolment
- High drop-out, most often due to cost of premium; lower premiums increase enrolment
- Solutions for poor: pay in instalments, subsidized premiums, removal of co-pays (flat fee for each service used)

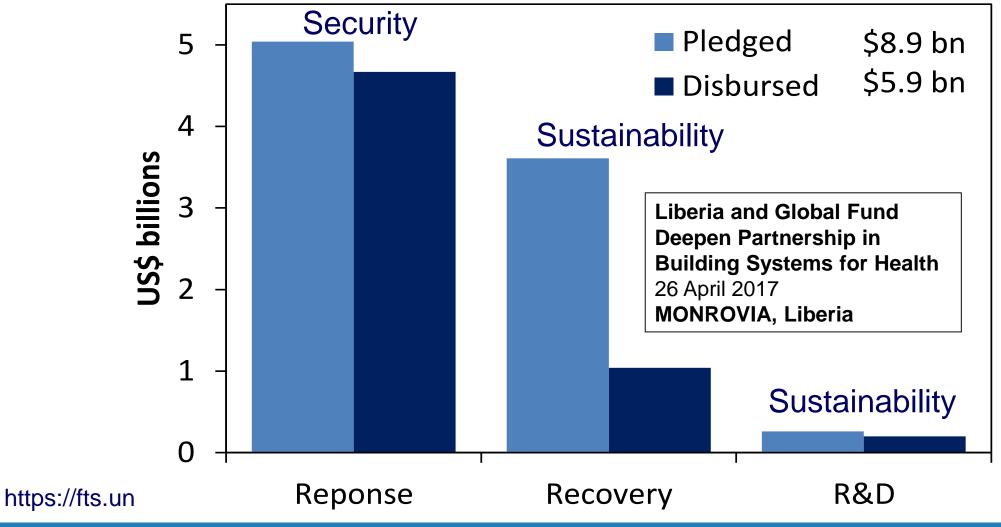

### Responsiveness for "health security" Investing in health systems to stop future Ebola outbreaks?

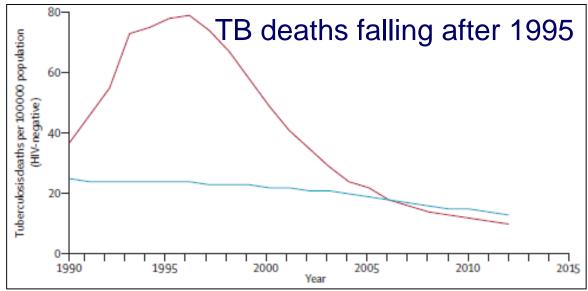

#### Finance: is UHC "The Affordable Dream"?

# Universal Health Care: The Affordable Dream

Amartya Sen, PhD, Thomas W. Lamont University Professor

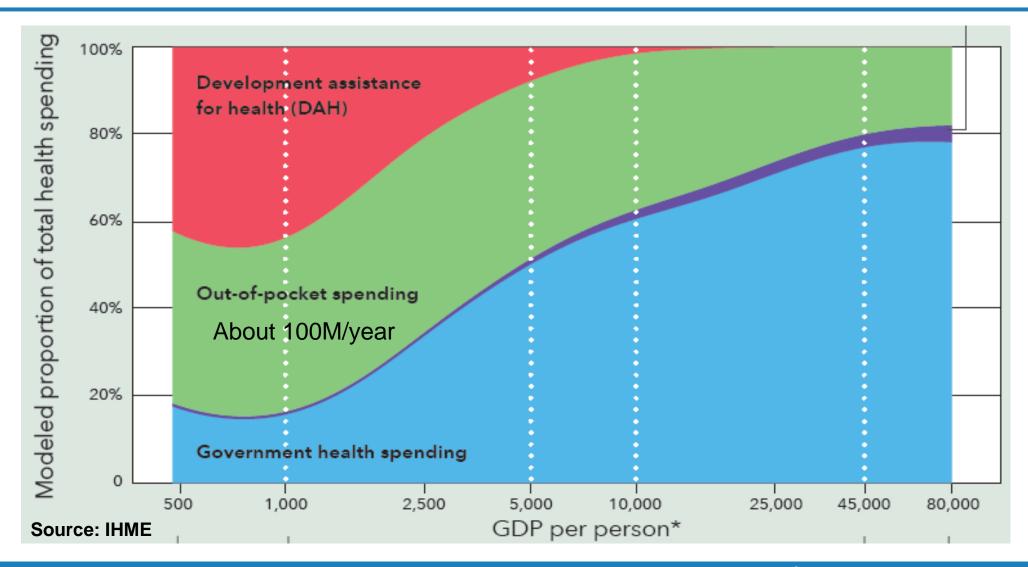

### Finance: Addis Ababa Action Agenda

Public, domestic \$\$ needed for UHC in low-middle income countries

# Financial arrangements for health systems in low-income countries (Wiysonge 2017)

- Community-based health insurance may increase use of services, but effects on health are uncertain.
- Uncertain if **social health insurance** increases people's use of services.
- Uncertain if increasing salaries of public sector healthcare workers improves the quantity or quality of their work.
- Conditional cash transfers (giving money to recipients of care on the condition that they take action to improve health) probably increase use of services, but have mixed effect on health.

#### SDGs unreachable without science & innovation

Research breakthrough of the Year 2015

Runner-up: WHOled study shows high efficacy of new Ebola vaccine

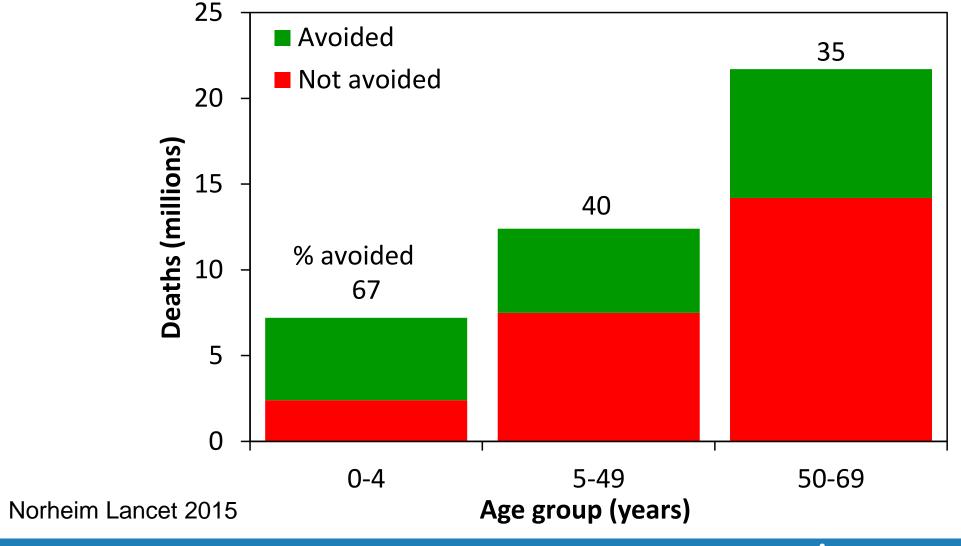

#### Measurement: how will the SDGs change practice? 42 health indicators – only 4 on "how" to reach SDGs

**Benefits for & from health** 26 Impact health+ social, economic, environmental **Goal 3 linked to all other SDGs** Prevention, promotion, treatment... **Population** 12 in Health (Universal Health Coverage) and coverage **Other Sectors (Health in All Policies)** Workforce Responsive **Products (medical+) Efficient Systems for** Infrastructure **Equitable** health: **Ethical Finance** ingredients & Quality Governance qualities Research Resilient **Information Sustainable** 

### What health benefits of meeting SDGs? Estimate: prevent 40% of premature deaths by 2030

### Sustainability: taking the long view

Looking back on today from 2030...
